 FIRST AID - Avoid contact with eyes and skin. If poisoning occurs contact a doctor or poisons information centre on 131 126.

Wilchem's Sentinel Range has been formulated to protect micronutrients in solution to allow for the correction of nutrient deficiencies. It is compatible with a wide range of crop protection products. It is stable in alkaline soils and in the presence of soluble phosphates. A jar test should be performed and/or test application before preparing a full tank mix. Do not apply during periods of crop stress or extreme weather. Ensure all other products are mixed in the tank before adding. Do not apply during flowering and colour change. Do not apply as foliar to stone fruit.
