

DRY-N™ Liquid Injection Fertiliser

with plant health regulators added

DRY-N™

March 08

A 31.5% Reactive Nitrogen Solution with Trace Element Catalysts buffered for dry sowing of broadacre crops.

Dry-N™ is a UAN based Nitrogen formulation blended with 8 other essential plant nutrients for accelerated uptake and utilization of Nitrogen (Copper, Zinc, Manganese, Potassium, Magnesium, Iron, Sulphur and Calcium). The Formulation has been designed for application by direct liquid injection under the seed.

DRY-N™ Provides:

- Rapid uptake and utilization of Nitrogen by the plant.
- Stability of storage and ease of handling.
- Buffered for better plant uptake and cell internal nutrient movement.
- Application in both acid and alkaline soil types
- Potassium, Magnesium, Calcium to lower free ammonia loss and provide beneficial plant nutrition.
- Sulphur to inhibit urease enzyme activity, stabilize N in solution, provide better N use efficiency and benefit plant protein manufacture.
- High levels of Copper, Zinc and Manganese as excellent catalysts for Nitrate fixation and metabolism and as valuable trace elements for disease resistance and seed yield.
- Cost competitiveness.

DRY-N™ Typical Analysis (w/v):

N	K	S	Ca	Mg	Mn	Zn	Cu
31.5%	4.8 g/L	2.4 g/L	6.1 g/L	1.5 g/L	3.4 g/L	3.2 g/L	0.7 g/L

Application Rates:

Apply at 15-50 L/ha injected in furrow, 25mm below seeding depth based on agronomist recommendation.
Agitate well.

Please consult your agronomic advisor for application rates in regard to recommended rates.
